This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1797 Excerpt: ...A chaffy divifion of the florets of the center, magnified. 5. A Female floret of the center, magnified. 6. The Chives of an Hermaphrodite floret, fpread open and magnified. 7. The Pointal of an Hermaphrodite floret, natural fize. 8. The fame, magnified. 9. The Seed-bud of a female floret, natural fize, with its feather. 10. The fame, magnified. Of all the plants, numerous as they are, compofing this natural Oafs, we know of no one, the Virgilia (a native of Peru, and introduced to us from the Paris gardens by Monf. Thoin, about twenty years ago, but fince loft to Europe,) excepted, which can rival our prefont fubject. It is a native of the Cape of Good Hope, and is faid, in the Kew Catalogue, to have been introduced to that collection, in 1774, by Mr. Marfan. Whether this is the *A. paradoxa* of Linn. Sp. U07. Vol. II, we arc not certain, as the chaff, dividing the florets, is there defcribed as of nearly the length of the ray, giving the flower an appearance of doublenefts, and is there likewife marked as an annual. But, there is little doubt of its being the plant intended in the Kew Catalogue, under our title; it is there made biennial, which is its true character, as it does not flower the firft year from feeds. It may be propagated by cuttings of the firft years growth; delights in a light fandy loam, and flowers in July or Auguft. Our drawing was made in 1802, from 3 plant in the Hibertian Collection; which had been raifed from feeds, fent the preceding year, from the Cape, by Mr, Niven. AMARYLLIS B R A S I L I E N S I S. Brasilian Lily-Daffodil. CLASS VI. ORDER I. HEXANDRIA MONOGYNIA. Six Chives. One Pointal. This fine Lily, from the Brazils, can fcarcely be thought
